

Robustness of the indices for the heavy-tailed cable outputs ($L_{\text{rest}} = 0.93\text{--}0.99$ of the cable-free section length, taut in 99.9% of runs)

(a) $T_{\text{wale}}(N)$: raw vs $\log(1 + T)$

(b) $T_{\text{course}}(N)$: raw vs $\log(1 + T)$

(c) cable ΔH : variance-based vs moment-independent
Spearman rank correlation 0.90
